Operative Report

Physician Name: Dr Bernard Landry

Patient Name _____ **Date** _____

Pre-Op Diagnosis _____

Post-Op Diagnosis _____

Procedure: Discography, Cervical Levels _____

Complications: _____

Procedure in Detail: After the patient consented, he was placed on the fluoroscopic table in the prone position. Standard monitoring consisting of blood pressure, EKG, pulse oximeter and end tidal CO₂ were applied. Intravenous line with angiocath 20g was inserted and intravenous sedation consisting of Versed and Propofol was titrated to effect. The skin was prepped with betadine and draped with a fenestrated drape. The skin was anesthetized with Lidocaine 1% using a #25g needle. Under fluoroscopic guidance with oblique view, the superior articular process of levels as stated above. Right posterior oblique extra-pedicular approach with a # 22g needle with a # 18g introducer was directed into the discs needle position was checked in AP and lateral view.

Needle position was:

Disc Level	Pain Reproduction
C 3-4	
C 4-5	
C 5-6	
C 6-7	

Discussion:

Post Discogram CT Results will be on the CT report from East Bank imaging.
