Operative Report

Physician Name: Dr Bernard Landry

Patient Name _____ **Date** _____

Pre-Op Diagnosis _____

Post-Op Diagnosis _____

Procedure: Lumbar Epidural Steroid Injection

Bilateral Right Left Midline Levels _____

Complications: _____

Procedure in Detail: The patient was positioned in a prone position and with guidance of the C-Arm the pedicle of levels L _____ Bilateral Midline Right Left were identified and marked. The skin was prepped with betadine and draped in a sterile manner. The skin was infiltrated with 2% Lidocaine with a # 25g needle. A # 22g spinal needle with 3 1/2" with pre curved tip was inserted into the six o'clock pedicles of levels L _____ Bilateral Midline Right Left and this was checked in lateral view. After Omnipaque 240 was injected and no vascular uptake or CSF opacification the following physiologic solution was injected:

1. _____ cc 0.9% NaCl PF
2. _____ cc of Marcaine 0.5% PF
3. _____ cc of Kendlog 40 mg/cc
4. _____ cc Isovue M300

The epidural needle was removed slowly. Pressure was applied. X-Ray pictures were taken and printed. The puncture site was dressed with Neosporin ointment and a sterile dressing.

Bernard Landry, M. D.
